ESG & GHG Management and Reporting Platform

A secure software platform for managing, tracking, and reporting environmental, social, governance (ESG) and greenhouse gas (GHG) data. Generate sustainability, carbon footprint and climate reports.

Veriport

Crowe

Crowe DNA brings you a turnkey ESG management technology solution.

Veriport enables companies to collect, verify, and report sustainability information across multiple sites and divisions, in line with regulatory, investor, and customer requirements.

- ESG and GHG data (including workflows) in one environment
- Compliance with leading sustainability and climate frameworks
- Outputs that are directed towards internal goals and external commitments

Why sustainability management matters

Regulatory pressure
New ESG laws impose penalties for non-compliance and supply-chain gaps, turning optional reporting into a necessity.

Stakeholder expectations
Customers want cleaner products. Investors require responsible practices. Regulators demand verifiable data.

Standards
Global rules and standards like the CSRD, IFRS, GRI, SEC climate disclosures and others make ESG compliance evidence-based, legally binding and cross-border.

What makes Veriport unique

Hierarchical ESG framework
Pillars, themes and topics built for your sector and maturity.

Standards alignment
Thousands of metrics mapped to GRI, SASB, TCFD, ISSB and other frameworks.

Credibility and expertise
Developed by consultants with decades of ESG practice - built for ESG, not a repurposed financial tool.

Secure and scalable
Roles, permissions, audit and security features ensure credible data and external assurance.

Solving your ESG challenges

Data and workflow
Manage ESG and GHG data across sites and divisions with dashboards, tasks and audit trails.

Automated calculations
Automated carbon engine computes emissions once activity data is entered, supporting footprint and climate reporting.

Collaboration & guidance
Notes, document hub, roles and permissions ensure collaboration, guidance and assurance.

Reporting and outputs
Generate sustainability reports, carbon footprints and ESG theme reports – filtered by site, division, year or topic.

Relevant outputs and business benefits

Outputs
Sustainability, carbon footprint and climate reports
ESG theme reports
Comprehensive data reports and measurements
Real-time KPIs and dashboards
Verified audit trails

Benefits
Save time and resources
Simplify complex ESG data
Reduce need for external consultants
Ensure data quality and security
Align with regulations and stakeholder expectations

We help you to progress on your ESG journey, achieving objectives and milestones that position you for leadership in your sector

Stage	Focus	Objectives
1. Foundation	Establish priorities	High-level double materiality assessment Core ESG policies Initial data capture
2. Development	Build capability	ESG strategy in place GHG measurement completed First sustainability report
3. Leadership	Full integration	Verified reporting Climate risk integrated into strategy Continuous improvement cycle

Veriport
Be The Change

Crowe Veriport

Data management and reporting
Manage ESG and GHG data in a secure environment. Capture, store, and organise information across sites and divisions. Filter and view data by theme, topic, metric, site or other parameters, and generate reports for internal management or external reporting.

Metrics library and KPI dashboard
Build an ESG and GHG profile from thousands of standards-aligned metrics, enabling focused or aggregated tracking and reporting at site, division, or organisational level. Develop KPIs, assign targets and track them via dashboards.

Automated GHG calculation
Comprehensive carbon engine that calculates emissions automatically once relevant activity data is entered. Supports carbon footprint and climate reporting at compliance level, aligned with best-practice methodologies.

Workflow management
Track progress on data collection and narrative reporting, assign tasks, and log activities. Monitor file movements, send email communications from any data point, and create custom instructions for each metric to guide your users clearly. platform.

Guidance and indexing
Topic-level guidance. Detailed disclosure guidance for all primary standards and frameworks. Content and disclosure index features.

Audit module
Provide third-party auditors or assurers with secure access to follow Veriport's audit workflows. Track audit progress, review submissions, and approve tasks to complete the assurance process efficiently

User notes
Add time-stamped notes, updates, and comments to any data point for additional context or collaboration

Document hub
Upload and link source documents and evidence directly to topics and metrics for verification and audit purposes

Roles and permissions
Apply granular access control down to a single data point, ensuring users only see and manage information that's relevant. Set roles to adjust user's capabilities in the platform

Outputs
Data reports filtered by site, division, reporting year, theme, topic, or metric. Export-ready narrative reports: ESG theme reports (e.g. risk, energy or employee data), sustainability reports, carbon footprint reports and climate reports. Automatic pull-through of data into narrative reports

Security
Corporate level security aligned with the security requirements of stock exchanges, banks, and listed companies

Expert setup, instant readiness

Onboarding

The onboarding process includes:

- An initial ESG and GHG assessment by our team
- Configuration of the platform to your requirements
- Coaching to get your team working with data and generating reports from day one.

Analysis
