

# The compliance landscape is an ever-present challenge for evolving organizations.

Regulators already scrutinize you for areas of noncompliance, and customers insist on reassurance that their private information is secure. Combine those pressures with new compliance standards and a complex regulatory landscape that need to be managed as you are expanding your business, and it's no wonder that your teams become frustrated, exhausted, and confused.

How can you ease the IT compliance fatigue to help your organization keep up with technological advances and enter new markets?

## As your business models change, the hub-and-spoke model can help you adapt to new regulations.

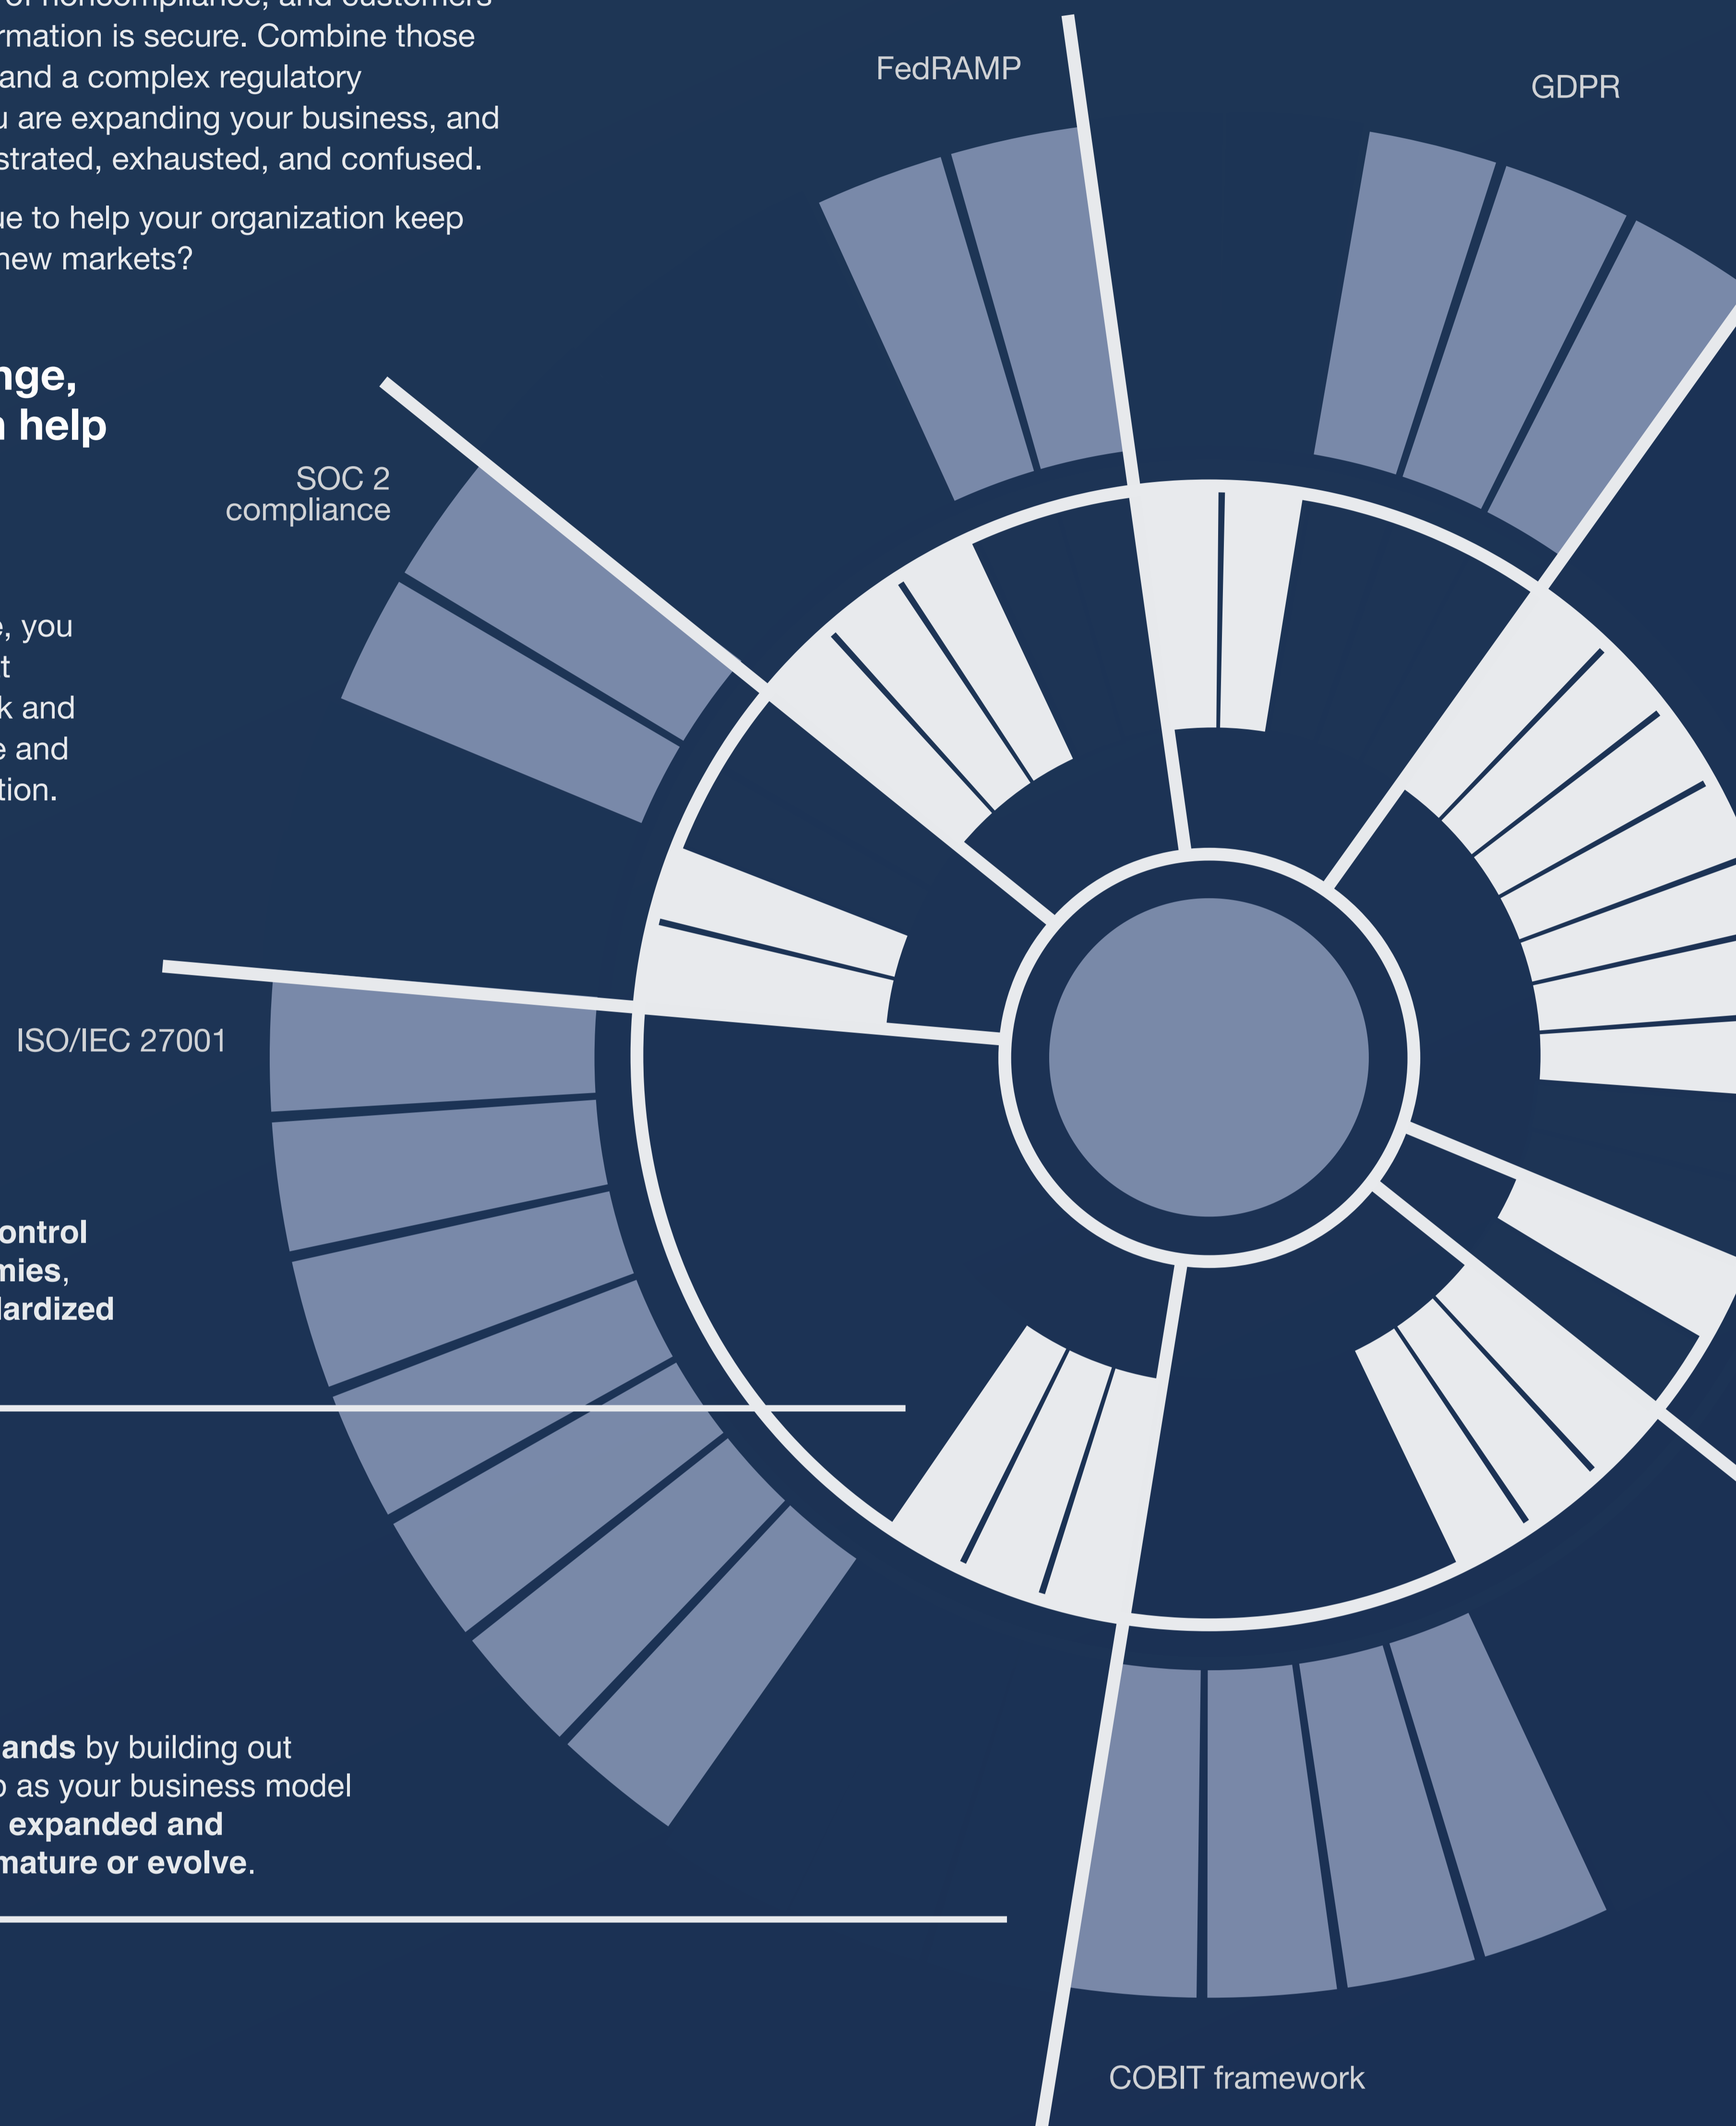

Rather than taking an ad hoc approach to responding to new regulations as they arise, you can implement a hub-and-spoke model that uses a consistent framework to manage risk and disperses the responsibilities of compliance and risk management throughout your organization.

### Hub

Build a strong foundation with a **common control framework** that includes **common taxonomies, risk and control frameworks**, and a **standardized issues management process**.

### Spoke

Meet **specific regulatory demands** by building out additional controls from the hub as your business model changes. **Spokes then can be expanded and consolidated** as regulations mature or evolve.

## You can use the hub-and-spoke model to provide a clearer picture for where you want to go so you can align your business objectives accordingly.

Take advantage of these benefits and change how your organization manages risk and compliance from the bottom up and the top down.

### Scalability

Scale your compliance needs up or down as you enter new markets and offer new products or services.

### Efficiency

Ease the compliance bottleneck by reducing siloed information, streamlining processes, and consistently evaluating and updating information.

### Maturity

Take a proactive approach to risk and compliance by establishing key risk indicators and key performance indicators.

### Sustainability

Automate controls and processes to manage compliance requirements more holistically.

### Governance

Collect and store relevant data so the compliance team can be alerted when a compliance issue arises.

## We can help you reduce the frustration that comes with compliance fatigue.

Building out a hub-and-spoke model that adapts to an evolving compliance landscape and demonstrates your efforts to customers can be difficult. We can help you design, implement, and evaluate the effectiveness of your compliance program to give you the peace of mind that you are meeting requirements in a reliable and consistent manner.

## Let's talk about how we can help you.
