Corporate Finance, Transaction advisory and Restructuring

As businesses grow and mature, the financial requirements and complexity increase to ensure smooth functioning of operations and expansions. There may also be a pressing need to widen the investor base and/or divestments/disposal post re-financing to lower debt to an acceptable level.

Recommendations to restructure the finance & legal functions, systems, internal policies, and procedures may lead to further strengthening of internal controls, streamlining operations, capture synergies, reduction of costs; thus, leveraging on new credit facilities.

Mergers and Acquisitions

Our Transaction Support services to help businesses plan better and negotiate as buyers and/or sellers. To ensure all the financial, legal and commercial aspects and the information exchanged are duly verified and validated. This is done to ensure that the buyers pay a fair price as per the market price (or in the seller's case, receiving less than the fair market price), and to ensure that their governance and risk management objectives are fulfilled.

Due Diligence

It is an essential part of review and evaluation of any investment opportunity, disposal or reorganization. It is a process by which confidential legal, financial, management, HR, operational and commercial information are reviewed and shared between key stakeholders and senior management.

Feasibility Studies

A blueprint for the success and growth. Helps the management to take informed investment decisions. This can be used for expanding the business, introduction of new products, analyzing and evaluating the financial impact and considering other implications about the proposed project. The main aspects of feasibility study are Market Analysis, Operational, Commercial, Financial Plan and Analysis.

Business Valuation

It is a process and a set of procedures used to estimate the economic value of an owner's interest in any company. The values are derived through robust financial modelling techniques and are based on a going concern premise, business assumptions and certain other variable factors. The valuations differ depending upon the company's overall standing within the industry, financial strengths, and valuation approach used, discount rate, nature of industry, economic conditions, risk perception and scenarios.

Business Plan

A Business plan ensures strategic planning of how a company manages and grows the business, re-emphasizing its vision, mission, values, and business strategy for realization of its corporate goals, laying down new growth and diversifying plans to maximize value for its key stakeholders, in the short term as well as over the long-term period usually for 5-7 years.
