Business Resilience Advisory

Audit / Tax / Advisory

Smart decisions. Lasting value.

Respond to disruptive events with agility and resilience.

Business resilience helps your organization endure upheaval, but it also reassures stakeholders, customers, and employees in times of calm. It can also help you handle emerging threats to your brand and reputation that are beyond the scope of conventional risk management.

Our business resilience team offers a pragmatic approach to help you prepare for unforeseen challenges, both online and off. We bring a proven approach to business resilience that can be adapted to your organization's needs and culture, and implemented with operational, hands-on involvement.

Five steps to help improve business resilience.

We can help your organization enhance its global resilience by helping you:

- Evaluate your business resilience risk and critical assets across the organization;
- Develop Business Continuity Planning strategies and identify realistic crisis scenarios;
- Recommend and test response plans through internal controls reviews;
- Develop Cyber Resilience Planning; and
- Conduct Technology Risk and Cybersecurity testing.

Business Resilience Risk Management

Taking a proactive stance on business resilience risk management leads to more effective strategies to minimize the downside while maximizing the upside of risk. We can help you look at how risk is managed throughout your organization so that you can be empowered to react decisively in a timely manner and profitably within today's complex global marketplace. Our focus also includes financial and non-financial regulatory compliance work to ensure robustness and compliance as required under the law, regulations and legislations.

Business Continuity Planning (BCP)

We can help you to assess business risks and identify different scenarios for unforeseen disruptions, establish adequate internal controls with the resources available and provide recommendations to improve your BCP.

In developing a resilient BCP, organisations should perform Business Impact Analysis (BIA), which involves scenario analysis to determine response times and resources required to address the potential disruptions, determine further action to be taken, coordinate a resilience task force and eventually conduct regular training and testing of the strategies.

We can also assist to update existing plans to current standards and business requirements, so that your organisation can remain strategic and resilient to address the Business Continuity challenges in our unpredictable world.

Internal Controls Review

As a valued advisor to our clients, we focus on understanding our client's businesses in order to assist them in managing their risks. We will work with you to arrive at pragmatic, practical and flexible solutions to mitigate business resilience risk and prepare for a pandemic without undue disruptions to business operations. With a customized value proposition to meet your needs, we will assist you in improving the adequacy of internal controls and process efficiencies. We will also test the response plans developed during BCP.

Cyber Resilience Planning

Business leaders must plan for how they will respond when – and not if – cyber attacks take place. Our cybersecurity professionals can help evaluate how prepared your organization is and assess your risk mitigation and disaster recovery plans. Strengthened cyber resilience, coupled with a well-planned response to incidents and breaches, can keep your organization on track.

Technology Risk and Cybersecurity Testing

An effective, well-managed information technology system is one of the most crucial competitive advantages an organization can secure. The right technology, implemented appropriately, properly managed and monitored, can lead to significant gains in growth and efficiency. We can provide these services, including Vulnerability and Penetration testing, to assist in the improvement of the security posture of organizations amidst the evolving developments of information technology and their related compliance requirements.
